WEATHER REPORTS AND FORECASTS FOR GDR AND CENTRAL EUROPE
ISSUED BY POTSDAM WEATHER BUREAU,
13 - 20 SEPTEMBER 1951

13 September

Temperature at 1200 hours on 12 September was 25 degrees. Pressure at sea level 1,017 millibars or 763 millimeters, dropping gradually. Between the Icelandic low-pressure system and the East European high-pressure area, warm air masses from the south are again moving toward Central Europe.

Forecast for Berlin and the German Democratic Republic: Continued mild and warm today, with local thunderstorms in the offing. Light southerly winds. Highest temperature 25 degrees or above, at night around 15 degrees.

14 September

Temperature at 1200 hours on 13 September was 29 degrees. Pressure at sea level 1,013 millibars or 760 millimeters. Continued warm along the front of low-pressure air masses moving across the British Isles and into the northern part of the North Sea area.

Forecast for Berlin and the GDR: Light to moderate winds between south and southwest, fair to cloudy, and very warm. Highest temperature today around 30 degrees, at night mostly 15 degrees or over.

15 September

Temperature at 1200 hours on 14 September was 22 degrees. Pressure at sea level 1,013 millibars or 760 millimeters, increasing rapidly. The spreading of atmospheric disturbances from the Atlantic to the mainland has brought an end to the unseasonably warm late summer weather. With the influx of cooler sea air, a ridge of high atmospheric pressure will pass over Germany today.

STAT

Forecast for Berlin and the GDR: Light to moderate southwesterly winds, cloudy, clearing occasionally, generally dry. Highest temperature today 20 degrees or above; lowest tonight, 12 degrees.

16 September

Temperature at 1200 hours on 15 September was 19 degrees. Pressure at sea level 1,021 millibars or 766 millimeters, dropping slightly.

Forecast for Berlin and the GDR: Fresh south to southwest winds, generally considerable cloudiness, scattered rains, especially before noon. Highest temperature today somewhat below 20 degrees, lowest at night around 13 degrees.

18 September

Temperature at 1200 hours on 17 September was 13 degrees. Pressure at sea level 1,018 millibars or 763 millimeters, rising slightly. There is an influx into Central Europe of masses of damp, cool ocean air moving along the northeast flank of a high-pressure area over Western Europe.

Forecast for Berlin and the GDR: Today light to moderate, and occasionally strong west to northwest winds, cloudy to fair. By afternoon overcast and rain, coming from the west. Cool, highest temperature today generally below 20 degrees, at night around 10 degrees.

19 September

Temperature at 1300 hours on 18 September was 15 degrees. Pressure at sea level, 1,015 millibars or 761 millimeters. The influx of masses of cool air from the Icelandic region into Central Europe, along the northeast flank of the East Atlantic, continues as the result of northwesterly upper currents.

Forecast for Berlin and the GDR: Cloudy, occasional showers, especially over the coastal region, with moderate or strong west to northwest winds. Continued cool with highest temperature today somewhat above 15 degrees, lowest temperature at night slightly below 10 degrees.

20 September

Temperature at 1200 hours on 19 September was 11 degrees. Pressure at sea level 1,011 millibars or 758 millimeters, dropping slightly. Continued influx of masses of cold air from the northwest into Central Europe, moving behind an active low-pressure area over the central Baltic.

Forecast for Berlin and the GDR: Variable cloudiness, occasionally clear, with scattered showers. Highest temperature today around 15 degrees, lowest temperature at night below 10 degrees. Moderate northwesterly winds.
